JALIPARTHI CHAITHANYA

Vissannapeta, Andhra Pradesh, India | 7386006998
chaitanyachoudary664@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Computer Science and Engineering student specializing in AI and Machine Learning, with hands-on project experience in AI-integrated applications, full-stack web development, text similarity analysis, pretrained-model image matching, and QR-based certificate generation. Skilled in Java, Python, JavaScript, database technologies, and Gemini API integration. Enthusiastic about developing AI-powered applications that combine frontend interfaces, backend services, and intelligent features. Seeking an entry-level AI-Integrated Full-Stack Developer role.

EDUCATION

B.Tech — Computer Science and Engineering (AI & ML)
NRI Institute of Technology
Expected Graduation: 2027 | CGPA: 8.59/10

Intermediate — MPC
DKNP Junior College | 2023
Percentage: 92.1%

Secondary School Certificate (SSC)
Sri Chaitanya Techno School | 2021
Percentage: 95%

TECHNICAL SKILLS

- **Programming Languages:** Java, Python, JavaScript, C
- **Frontend Development:** HTML5, CSS3, React.js (Basic)
- **Backend Development:** Node.js (Basic), Express.js (Basic)
- **Databases:** MySQL, MongoDB, SQLite (Basic)
- **AI & Machine Learning:** Gemini API Integration, scikit-learn, NumPy, pandas
- **Tools & Platforms:** Git, GitHub, VS Code, Android Studio

Professional Experience

AI & Machine Learning Intern | NextHub
Vijayawada, Andhra Pradesh | Remote | 10 Apr 2026 – 10 Jul 2026

- Completed two months of training in machine-learning fundamentals and classification techniques, building foundational knowledge for practical AI and machine-learning development.
- Applied machine-learning concepts during the final month of the internship by developing a Python-based image-matching prototype using a pretrained model to compare two images and return a match or no-match result.

PROJECTS

1. AI Voice Assistant — Android Automation

Technologies: Java, Android, Gemini API, Speech Recognition

- Built a voice-controlled assistant prototype that recognizes spoken commands and launches applications on the device.
- Integrated the Gemini API to generate AI responses and tested voice-command recognition and application-launching workflows.

- Identified and fixed a voice-command recognition issue, improving the assistant's ability to recognize and process spoken commands.

2. Simple Plagiarism Detector — Text Similarity Analysis
Technologies: Python, Streamlit, scikit-learn, TF-IDF, Cosine Similarity

- Developed a Python and Streamlit application that accepts manually entered text and uploaded files for comparison.
- Applied TF-IDF vectorization and cosine similarity with scikit-learn to calculate text-similarity scores between submitted text and user-uploaded reference documents.

3. CertiChain — Student Certificate Generation and QR-Code Verification System
Technologies: Python, Flask, MySQL, QR Code Generation

- Created a certificate-generation web application using Python, Flask, and MySQL to store and manage student certificate records.
- Implemented QR-code generation and scanning to direct users to a webpage displaying the corresponding student certificate.

4. Image Matching System Using a Pretrained Model
Technologies: Python, Pretrained Model

- Built a Python-based image-matching prototype using a pretrained model to compare two images and return a match/no-match result.
- Manually tested the image-comparison workflow and confirmed that it produced the intended output for the inputs tested.

5. MedTech — Smart Healthcare Website Prototype
Technologies: HTML5, CSS3, JavaScript, Node.js

- Developed an interactive healthcare website prototype featuring patient management, symptom tracking, medicine reminders, and digital prescription interfaces.
- Implemented interactive frontend features using JavaScript and explored Node.js backend integration for healthcare data management.

6. Disaster Management and Rescue Connect — Website Prototype
Technologies: HTML5, CSS3, JavaScript, LocalStorage

- Designed a disaster-management website using HTML, CSS, and JavaScript with interfaces for reporting victim status, viewing resource availability, and coordinating rescue-team activities.
- Implemented browser-based data storage using localStorage to retain supported information within the website.

CERTIFICATION

- IBM SkillsBuild – Artificial Intelligence Fundamentals (Oct 2025)
- Infosys Springboard – Artificial Intelligence Primer (Jun 2025)
- Infosys Springboard – Introduction to Deep Learning and OpenAI GPT Models (Jun 2025)
- Infosys Springboard – Generative Models for Developers and Prompt Engineering (Jun 2025)
- Infosys Springboard – Introduction to Data Science and Robotic Process Automation (Jun 2025)
- Infosys Springboard – Agile Scrum in Practice and Email Writing Skills (Jun 2025)
- NextHub – AI and ML Domain Internship Certificate (3 months)
